

SURVEYS FOR DEVELOPERS & ARCHITECTS

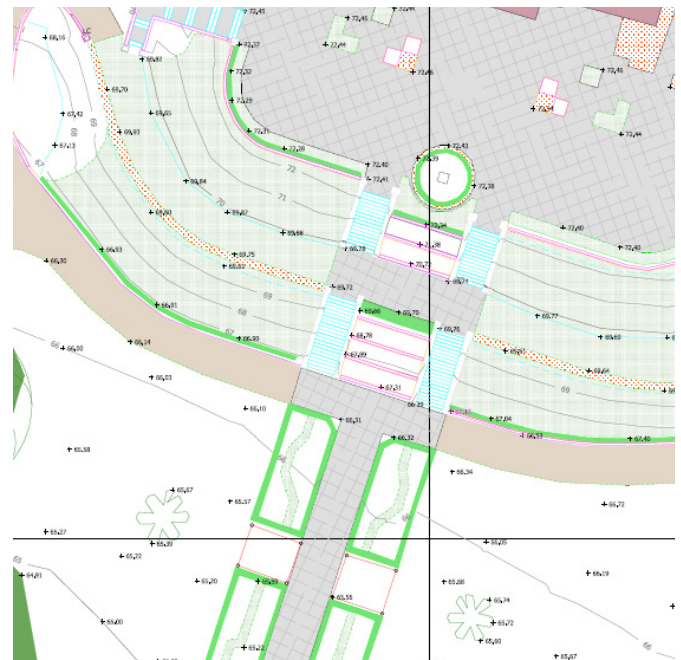

Reference: CS-44

GWP Consultants skilled survey team conduct surveys nationally and internationally, producing high quality topographic surveys to meet the individual project requirements.

- Pre Development surveys - Surveys conducted using a wide range of survey techniques (UAV, GPS, Total Station and 3D Scanning) to ensure detailed site coverage is accomplished.
- Land Registry plans - Experience undertaking property boundary survey drawings, produced in AutoCAD by GWP Consultants in-house Drawing Office, to the Land Registry specification.
- Bulking factor determination - Repeat surveys over 1 million m³ development site were undertaken. The resulting DTM's were used for volumetric analysis and to record the bulking factor of the cut and fill operation. The bulking factor achieved was different to the predicted ratio used to design the final landform. Using the repeat survey information it was possible to provide an early estimate of the actual bulking factor and the final designs were amended.
- Surveys can be undertaken to individual specifications, deliverables can be tailored to meet the requirements of the end user.

UAV Survey of housing development

Conventional survey of a re-development site
